Advanced Installer is our first choice for packaging software because their solutions empower our teams to deliver efficiently and with high quality.

We've found their interface to be easy-to-use, the support documentation robust, and they are always there to support us when we need them.

With the constant evolution of the MSIX format, we are happy to have chosen a software provider that is not just keeping pace, but leading the pack.

Nathan Coulling

As a leading supplier of ETRM applications, Amphora has standardized on the use of Advanced Installer company-wide. Since implementing a set of automated installers using Advanced Installer, our deployment landscape has changed entirely!

A single person running the installers can now accomplish on a 5 server system in less than 2 hours what originally took 3 people 3-5 days to accomplish. The need to edit countless configuration files across multiple servers is gone.

- **Full PSF support.**
- **45+ in-house fixups included, continuously expanding.**
- **Intuitive GUI for editing at any level.**
- **Available starting with v23.0 for all Enterprise users with an active license.**

"We chose Advanced Installer due to its flexibility, technical capabilities, and progressive approach - let's appreciate that it is the first packaging software solution to support the innovative MSIX format.

Advanced Installer is now an intrinsic part of our software development process, with packaging outcomes complementing the quality of our products."

Jeremy Moskowitz,
Founder and CTO of PolicyPak Software

Streamlined MSIX Deployment with MSIX Custom Install Actions

Bundle and install third-party redistributables (.exe, .msi) alongside your MSIX packages – all in one seamless deployment.

Native Desktop Shortcuts for MSIX Packages

Create fully native desktop shortcuts in your MSIX packages, complete with custom names, arguments, working directories, and icons – without relying on the PSF.

Strengthen Security with Built-In SBOM Integration

Ensure transparency and compliance by including SBOMs directly into your installation packages.

Suite Installer: Deploy Multiple Apps in One Package

Bundle and deploy multiple applications in a single installer. Customize deployment options and let users choose what to install.
